ABSTRACT:

   PROBLEM TO BE SOLVED: To provide a simple method for
converting table data
to a file for Web site when distributing the contents data of an
advertisement
or the like hung in the train.

SOLUTION: This method for converting data to file for Web site is provided
with a step 11 for preparing one data unit by relocating the data of a table
form composed of plural elements in one-to-one correspondence of the other
element to one of plural elements, a step 12 for assigning an ID for each data
unit and a step 13 for defining functions for constituting a Web page by
working the data unit, to which the ID is assigned, so as to enable desired
retrieval and relating a certain Web page among Web pages with the other
related Web page in a computer language for describing the Web pages.
